HIGHLIGHTS OF THE CENSUS

The main highlights of the Third Census of Small Scale Industries are as follows:

I. Registered SSI Sector

- All the SSI units permanently registered up to 31-3-2001 numbering 23,05,725 were surveyed on complete enumeration basis, of which 14,37,704 units (62.35 %) were found to be working and 8,68,021 units (37.65 %) were found to be closed.
- Of the 7,50,102 working units for which Validated Data is available, 4,92,804 were SSIs and 2,57,298 were SSSBEs. Thus, the proportion of SSIs is 65.7 %. About 4.5 % of the SSI units were Ancillary Units. The proportion of the units operating in Rural Areas was 45.8 %.
- In terms of number of working units, five States, viz., Uttar Pradesh (12 %), Tamil Nadu (11.7 %), Gujarat (11.3 %), Kerala (10.5 %) and Karnataka (9.1 %) had a cumulative share of 54.6 %.
- With regard to closed units, five States, viz., Tamil Nadu (16.2 %), Uttar Pradesh (13.4 %), Kerala (8.4 %), Madhya Pradesh (7.4 %) and Maharashtra (7.1 %) had a combined share of 52.5 %.
- 90 % of the units were proprietary units and about 6 % of the units were partnership units.
- The per unit employment was 4.6. The employment per rupees one lakh of investment in fixed assets was 0.65.
- About 11.08 % of the units were women enterprises and 51.45 % of the units were managed by the entrepreneurs from socially backward classes.
- Rice Milling industry topped the list of industries in terms of gross output. Among the top 50 industries having heavy fixed investment, its contribution to generation of employment per rupees one lakh of fixed investment was 0.37.
- Compared to the Second Census, the Third Census brought out some structural changes in the Registered SSI Sector. While the proportion of working units remained the same by and large, the domination of SSIs among the working units has gone down considerably from 96 % to 66 %. This is mainly due to the increase in the number of units engaged in Services. The per unit employment has gone down from 6.29 to 4.6. The per unit fixed investment has gone up from Rs. 1.60 lakhs to Rs. 7.11 lakhs. This could be due to technological upgradation.

II. Unregistered SSI Sector

- This Sector was surveyed using a two-stage stratified sampling design. Out of the 9,94,357 villages and urban blocks, 19,754 villages and urban blocks were surveyed to identify the units of Unregistered SSI Sector. Out of these selected villages and urban blocks, Validated Data is available in respect of 18,205 only in which 3,69,606 unregistered SSI units were listed. About 1.77 lakh units were actually surveyed out of which validated data is available in respect of 96,431 units. The estimates of various components of the Unregistered SSI Sector would be furnished after completion of the validation process.
- Out of the 96,431 unregistered units, only 36 % were SSIs and the rest were SSSBEs.
- The reasons for Non-registration were elicited in the Third Census. Interestingly, 52.3 % of the units informed that they were not aware of the provisions for Registration, while 40.6 % of the units indicated that they were not interested.
- About 49.8 % of the units were engaged in Services while 33.6 % were engaged in manufacturing and the rest 16.6 % in repair/maintenance.
- 97.2 % of the units were proprietary units and about 1.25 % of the units were being run on partnership basis.
- The average employment was 2.11 and the employment generated per rupees one lakh of fixed investment was 1.71.
- About 10.66% of the units were women enterprises and 55.62% of the units were managed by the entrepreneurs from socially backward classes.

III. Sickness in SSI Sector

- Sickness was identified through the latest definition of RBI given by the Kohli Committee and Incipient Sickness was identified in terms of continuous decline in Gross Output.
- Sickness identified in the Registered SSI Sector was of the order of 2.5 %, whereas in the Unregistered SSI Sector, it was 0.78 %.
- Out of the units having loan outstanding with Institutional Sources like Banks and Financial Institutions, sickness was about 14.08 % in the Registered SSI Sector and 13.47 % in the case of Unregistered SSI Sector.
- Incipient sickness identified in terms of continuous decline in Gross Output was 13.01 % in the Registered SSI Sector and 7.76 % in the Unregistered SSI Sector.
- Combining the three yardsticks used to measure sickness, viz., (a) delay in repayment of loan over one year, (b) decline in net worth by 50 %, and (c) decline in output during last three years, about 14.47 % of the units in the Registered SSI Sector were identified to be either sick or incipient sick, while this percentage was only 8.25 in the case of unregistered units.
- The States of Kerala, Karnataka, Chattisgarh, Maharashtra and Tamil Nadu had the maximum share of sick units in the Registered SSI Sector.
- *Lack of Demand*' and '*Shortage of Working Capital*' were the main reasons for sickness/ incipient sickness in both the Registered and Unregistered SSI Sectors.
